

DELIVERABLE 2.1.3

ASSESSING ESMs

INVENTORY FRAMEWORK

(template + results for every WP)

PARTICIPANTS :

Scientific partners (conception). SHOs and NHAs (data collection)

OBJECTIVES :

The Inventory framework has been the central tool for the data collection.

The Inventory framework gathers main informations regarding the economic, energy and awareness performance of every ESMs.

This document is a data basis. Every SHO and NHA completed informations and facts about the different measures experimented during the last 5 years.

The Inventory is divided into 5 Work Packages according to the Annex I. Every indicator may not be completed and has to be foreseen according to the concerned energy saving measure. The Inventory is a first step to look for informations about ESMs and to select the most relevant ones.

EVALUATION :

- The inventory is a succession of informations which gathers over 200 ESMs experienced by SHOs. The document set up an important basis of quantitative datas. These datas are the raw material of the AFTER project. Qualitative datas have been more difficult to collect for SHOs. Qualitative informations (especially awareness datas) will be added step-by-step for the most relevant ESMs during the pilot sites preparation and implementation.
